

Use & care

A few practical steps for planting, watering, transplanting and preparing fabric pots for reuse.

01 / Prepare the pot

Check the fabric and seams. Place the pot on a stable surface with free drainage and fill it evenly with a substrate suited to the crop.

02 / Water according to the plant

Check substrate moisture and adapt watering to the plant, weather and growing conditions. Drainage does not remove the risk of overwatering.

03 / Transplant with care

For Transplanter, release the hook-and-loop opening to access the root ball. Support the root ball and avoid pulling the plant by its stem.

04 / Prepare for reuse

Remove substrate residues, clean and dry the pot fully. Inspect the material and seams before reuse. Ask Gronest about cleaning methods for your specific crop.

Need help choosing a size?

Tell us the crop, cultivation method and available space. We can discuss the options with you.
